Bulb Export Retail Price List

August 2023 (includes seasonally dormant bulbs). This list also includes on occasion, caudiciforms & tubers

Introduction to the Bulb List

Our bulbs are priced according to rarity and the ease or difficulty in propagating or procuring them. Small and young bulbs are sold at the stage where the plants grow rapidly once potted up in the correct manner. Most South African bulbs thrive in a well drained gritty medium. Slow draining potting soil mixes and clayey soil or any sand that compacts like cement, should be avoided since they predispose bulbs to rot. The SA Bulb Company recently moved house and nursery to Roodepoort a suburb of South Africa's biggest city of Johannesburg. This is a temporary move after having been on a farm for almost 25 years. In about 3 years or so, we will make our final move to either the Drakensberg Mountains or somewhere in a small town in one of the Cape Provinces where we will have enough space again to expand our production facility. The next 3 years will be spent sourcing and growing more interesting and rare species and being in a better position to travel the country which we have been unable to do for the past few years due to the many challenges of living on a farm in this country. We have been in the industry for 26 years & exporting for almost 20 years. We have incorporated our SPECIALIST FLORA into this price list. Specialist flora focuses on select South African bulbs that are either very rare, or the specimens are large/mature or the bulbs have special characteristics in their growth habit, foliage or flower colour. We are focusing on beautiful foliage including Gethyllis, Eriospermum, Drimia, Ledebouria, Drimiopsis, Albuca, Ornithogalum, Resnova, Massonia, Daubenya, Hessea, Strumaria, Haemanthus & other rare genera. Much of the rare stock is very limited and is sold on a STRICTLY FIRST COME FIRST SERVE BASIS.

TERMS AND CONDITIONS

We apologise for the lengthy Terms and Conditions but it seems that most folks simply do not read and we want satisfied customers who will continue to support us as this is our livelihood BUT shipping problems can arise depending on where you are and the method of shipping you choose so please read carefully.

SIGNIFICANT CHANGES TO OUR POLICY WITH REGARD TO PAYMENT AND SHIPPING WITH IMMEDIATE EFFECT.

- **We NO LONGER ACCEPT ANY PAYPAL PAYMENTS WHATSOEVER.**
- **We will no longer be applying for phytosanitary certificates until you have paid for your order.**
- **Paygate is now available for master & visa credit card payments if your bank offers the 3D Secure system whereby you are notified via sms when transacting with your cc.**
- **At this time, payments can be made via Paygate, International Bank Transfer (IBT) – IBT must be used for very large valuable orders ie those of a few thousand dollars, WISE (a cheaper alternative to Paypal and you pay directly to our bank account so cheaper than IBT too) and WU International Payments Platform (the business division of Western Union – wu.com).**
- **Orders cannot be cancelled once confirmed and shipped.**
- **We do not issue refunds of any kind to anyone.** We send you photos of all the bulbs in your order before we get a phyto and ship so that you can see exactly what you are getting & you are welcome to change your mind at that stage but no later than that. You cannot decide while the order is still en route or once you have received your order that you are in dire financial straits and need a refund or you don't want the bulbs anymore or you claim that you can get the same bulbs cheaper elsewhere and want the difference in price refunded to you as what someone in China did in early 2020!!! We are also very clear on sizing. You will know the exact size you are getting by carefully reading this price list and from the photographs of your bulbs. A photographic record of your order is the most effective way of ensuring that our clients know what to expect and we have proof of what was shipped. **Chancers must not even try and do business with us.**
- **We are also very clear on the best and safest shipping methods. Choose DHL with a phyto for peace of mind because there are absolutely no comebacks should you choose EMS or Airmail and your order fails to arrive or you have to wait months for it to arrive due to massive delays in the postal system, postal strikes, incompetence on the part of the South African Post Office or pandemics or any other reason that is totally beyond of our control. EMS & Airmail can take many many weeks, even a few months if you are in the Far East. The risk is entirely yours if you select EMS or Airmail and particularly if you are in South Korea or Hong Kong. We cannot emphasize this enough.**

Export stipulations. On placing your order, we assume that you have read and understood the stipulations below. Do not proceed until you have read these introductory pages!

1. After exporting for so many years now, we must inform all our customers that a phytosanitary certificate is now a requirement in most countries and you would be well advised to let us get a phytosanitary for your order so that there are no problems with customs. If you inform us that your country genuinely does not require a phyto to

accompany bulb shipments, that's fine but the risk is all yours. If your country does require a phytobut you refuse one on the grounds that you are unwilling to pay for it and your order is seized or shipped back to us in poor condition or fails to arrive back here, the risk and loss is entirely yours & we will not engage in any further communication in that regard. **A digitally printed phytosanitary certificate currently costs \$40.00 & \$60.00 for a paper printed certificate for Taiwan that has to be collected from the department of agriculture.** The Plant Health division of the SA Dept of Agriculture requires us to have soil tests done every 3 months. As a result there will be occasional delays of about 2 weeks while we wait for soil test results. In all our years of exporting, our soil test results have always come back clean.

2. Please note that if your country requires certain stipulations (ie additional 'extraordinary stipulations' which require more specific soil testing) on the phytosanitary certificate, you will be obliged to pay for any extra soil tests that have to be done in order to abide by the laws of the importing country but this very very rarely happens.

3. **When we state seedling or small bulb, we mean just that, a very small bulb, sometimes tiny depending on species. When we state flowering size, the bulbs are flowering size because they have flowered in our nursery, irrespective of the actual size of the bulb, again all depends on the species.** If you are on a tight budget, small bulbs are much cheaper to transport. Some flowering size South African bulbs are huge and very heavy. Keep this in mind when placing your order and be prepared to pay the high shipment costs for these big bulbs.

Evergreen bulbs can be shipped at anytime.

Most summer growing bulbs (ie dormant in winter) are best shipped during our southern hemisphere winter, ie May to August such as Ledebouria and Drimiopsis.

Most winter growing bulbs (ie dormant in summer) are best shipped during our southern hemisphere summer October to March.

4. Prices are quoted in **US\$ dollars** at this stage but we will invoice you in any currency of your choice, should you so prefer.

5. PAYMENT

No bulbs whatsoever will be despatched without payment first.

If you pay by IBT, all you need to do on receipt of the invoice which stipulates all our bank details, is to take the invoice to your bank or instruct them to make the payment to our account on your behalf. Please note that if you are paying us by IBT & you reside in the UK or EU, you may request us to invoice you Pounds or Euros because the bank charges are very high if the transaction has to be converted first to US Dollars and then to South African Rands.

6. HOW WE SHIP – please read carefully

We strongly advise all customers to choose either DHL or air cargo for large heavier orders as the South African Post is imploding and can no longer be trusted to deliver any parcel anywhere.....not even locally.

We have been fortunate over the past almost 2 decades of exporting, that rarely have orders not arrived but there have been instances where customs has seized orders in China for example due. **This is entirely your risk.** If you live in a country with very strict import restrictions, we suggest you find an alternative neighbouring country that we could export to or you must follow the rules and

apply for an import permit etc.. If you insist or have no other option but to request shipping by the South African Post Office, the risk is entirely yours. We cannot reimburse anyone for the loss or non-arrival of rare bulbs. Once the parcel has been shipped, we can no longer be held responsible for what happens to it even though we go out of our way to try and track and trace the occasional missing parcel. **The South African Post Office (SAPO) does not reimburse any shipper or buyer for loss of parcels or delays in shipping. Please understand this, SAPO will not reimburse shipping costs or the value of the order if they fail to ship your order or they ship it but it gets lost while in transit internationally.**

The shipping process

- * Once all the roots and leaves are cut off the bulbs and the bulbs are washed thoroughly, they must first dry completely before they can be shipped. This can take 2 days or 7 days depending on the size of the bulbs and size of the order
- * We now keep photographic records of every order shipped via the South African Post Office as follows.
- * As soon as we are ready to ship, we will take a photograph of all the bulbs in your order.
- * The sealed box containing your order will be photographed at the post office once it has been stamped.
- * You will then be emailed the tracking number or waybill details and the photographs of your order and the box/es will be emailed to you.
- * You can then start tracking your shipment after approximately 3 days of shipping ie once it is processed by the first sorting office.

SHIPPING TO P.R CHINA AND HONG KONG

A phyto is now required for ALL IMPORTS into HK. Acquiring a HK import permit is a simple and speedy process and we cannot ship to HK without one and a phytosanitary certificate. Unfortunately this means that customers in mainland China need to have a friend in HK who can get an import permit as Livedoors Shipping Agent in HK does not apply for import permits.

SHIPPING TO TAIWAN

Regrettably, exporting to Taiwan is becoming difficult unless you are placing a large order that is heavy enough (10kg at least) to make it worthwhile to ship with air cargo or DHL for smaller orders. Import regulations are very strict and that would be an under-statement and an IMPORT PERMIT & phyto certificate are a necessity + numerous other requirements which we are familiar with. We do not ship with EMS to Taiwan as the shipments don't arrive. Please also note that due to the fact that we have moved and now fall under a different branch of Plant Health which is much further away & the fact that Taiwan insists on an 'original' phyto and not an electronically generated one, we are forced to charge \$60.00 for a phyto which includes having to travel 160km round trip to go and fetch the original phyto.

SHIPPING TO JAPAN

Our Japanese customers were the first to support us when we started exporting 20 years ago and remain very supportive and loyal to us. We have never encountered any problems shipping to Japan but a phytosanitary certificate is now required for all orders no matter how small. We were recently informed that DHL Japan will no longer process any plant imports so this is very bad news and effectively means that there are now only 2 means of shipping to Japan namely air cargo and EMS the latter of which is sadly now extremely risky.

SHIPPING TO SOUTH KOREA

The import requirements for South Korea seem to change on a whim and as a result the responsibility to ensure that we have all the correct information stipulated on the invoice and phyto rests SOLELY WITH THE IMPORTER. We WILL NOT BE HELD RESPONSIBLE IN ANY WAY FOR ANY PROBLEMS WITH SOUTH KOREAN CUSTOMS. A few months ago, we were told only 10 bulbs are permitted entry into South Korea with no issues. More than 10 bulbs requires DHL Waybill numbers being printed on the phytos which is insane and not permitted with the ECERT system. So best for all South Korean customers to find out from their plant health and customs departments what is the correct way of importing. All payments from South Korea must be made via Bank Transfer / SWIFT. No Paypal payments allowed.

SHIPPING TO THE USA

NB: We cannot accept a US Plant or Seed Import Permit that does not specify SOUTH AFRICA as a country of origin. The South African Dept of Agriculture WILL NOT ISSUE A PHYTO if South Africa is not specified on the phyto. The onus is on you the customer, to ensure that you send us the correct documentation as we cannot be held responsible in any way for your failure to do so and we will not refund any payments due to delays in processing your order while we wait for your new import permit to arrive nor will we refund any payments for any shipment being seized in the USA because the import permit is lacking for whatever reasons. We will not send any shipments to the United States of America without receiving the import permit and green and yellow box labels first. USDA is now sending back any orders that are not shipped to the USDA INSPECTION STATION stipulated on the green and yellow labels SO NO LABELS NO EXPORT. Please consider using the USDA Plant Inspection Station in San Diego as it is the best and hassle free. We do not make the rules regarding plant imports into the USA, so please do not question why we cannot send bulbs to the States without complying with their import requirements first. **Gladiolus and Crocosmia bulbs from Africa are prohibited entry into the USA.** So please do not order them.

SHIPPING TO THE RUSSIAN FEDERATION

Only via air cargo.

SHIPPING TO CANADA

An import permit is now required according to the Department of Agriculture.

SHIPPING TO ISRAEL

No exports to Israel without an import permit as our dept of agriculture will not issue a phyto without an Israeli import permit. If you request shipping without a phyto for small orders, the risk is entirely yours as is company policy.

SHIPPING TO THE EU

Some customers in the EU request small boxes sent without a phyto via the post office. That is fine but the risk is entirely yours & **we will not resend any orders that are seized by customs or returned to us by customs in poor condition months later because the customer did not want to pay for a phyto as what was recently the case in Denmark.** We would not advise any customer to forgo a phyto for larger heavier boxes.

SHIPPING INTO SUB-SAHARAN AFRICA

An import permit and phytosanitary certificate are required for all trade in any plants between African countries. So you will need to apply for an import permit. Our department of agriculture will not issue any phyto without an import permit.

NO GO COUNTRIES

Bulgaria, Iran, Lebanon, North Korea, Cambodia, Vietnam, Myanmar.

All Shipping Options summarized

- EMS – ENTIRELY YOUR OWN RISK & we no longer advise it all
- PCA PERISHABLE CARGO AGENTS – very reliable for example from our nursery to Europe via Emirates Air Cargo, just 2-3 working days and as long as the shipment is large ie at least 10kg, it is much much cheaper than the SA Post Office but it is very expensive for very small shipments. Please note that you will require the services of a shipping agent to clear the shipment through customs.
- DHL International courier to almost anywhere in the world – pricey but super fast & **a phytosanitary certificate is a necessity for shipping with DHL (their policy is NO PHYTO, NO SHIPPING)**. Please note that we cannot use DHL for any shipments to the Russian Federation or Japan.

7. In the unfortunate event that your order has been delayed in the international postal system due to strikes etc, most dormant bulbs will be fine after reasonably lengthy delays as long as they are planted immediately on arrival and watered well.

It is important to familiarize yourself with the **growth habit of some bulbs**, for example clivias are shipped with their leaves intact but their roots dessicate within a few days of being removed from the soil. Upon arrival, soak the roots in water for an hour and then plant.

We will also not be held responsible for any **plant losses** due to incorrect planting/care on the part of the client. We do give basic planting instructions in our bulb catalogue, but if you are unsure in any way, you must request more detailed instructions from us.

When the box arrives in the country of destination, **the onus is on our customers to immediately open the box and plant the bulbs**, the longer the bulbs stay in the packets in the sealed box particularly if the weather conditions are hot and humid or the temperatures are sub-zero, the greater the chance of problems arising.

8. We reserve the right to charge a **handling charge** on any very large order depending on the time it takes to clean all the bulbs. The charge is determined by the quantity of bulbs purchased. Loyal, repeat customers are not charged handling fees.

9. Wholesale sales. In order to qualify for wholesale prices, you must be a grower/wholesaler/reseller or botanical garden/research institute. Wholesale usually implies a minimum of 10 bulbs per species. We are though within reason & depending on how much you buy in total, open to negotiation regarding quantities.

10. We propagate a lot of our own stock, but we do buy in from small growers across the country. If it should happen, that you receive a bulb from us and on flowering it is not what it is supposed to be, it is vitally important that you let us know immediately and we will **replace** that bulb with your next order if we have stock left otherwise we will credit your next order.

11. The onus is on the client to check with their local Dept of Agriculture as to what **plant species** are not **permitted** into their respective countries.

12. We usually have a **minimum order stipulation of \$75.00** + phyto and shipping BUT if your order is under \$75.00 and we are very busy, we will process and ship your order as and when we are able to.

NB: How to Navigate this New Price List

- Prices are per bulb unless listed as packets (pkts). If a price is listed in the 11-100 bulb column, we might not be able to supply your required number if our stocks are very limited.
- If we state x1 or x2 or x3 that means those quantities are all we have left namely 1, 2 or 3 bulbs and they are priced per bulb.
- **All bulbs, rhizomes, tubers, corms are FLOWERING SIZE (FL) unless otherwise stated. If there is no FL stipulated, it is FL size.** FL is usually only stipulated where there are different sizes offered.
 - If bulbs are stated as being sold out, we are keeping them on our price list as we anticipate having stock again in the near future.
 - **Winter Rainfall Bulbs are in Green. There are also numerous evergreen and summer rainfall species that do very well in the winter rainfall region like Eucomis, various Crinums, Agapanthus, Clivias, Dietes, Haemanthus, Nerine, Tulbaghia, Zantedeschia aethiopica, Scadoxus multiflorus subsp. katherinae.**
- Semi-shade means morning sun and midday to afternoon shade. Dappled shade means filtered sunlight. Waterwise means they are drought tolerant within reason of course.
- The intro boxes are important and are there to help you understand the growing conditions of the bulbs. Our website also has a whole page dedicated to growing and maintenance of bulbs.

We have just added some uncommon and some very rare bulbs from our private collection built up over many decades/motherstock, to this list. all highlighted in blue.

<u>SPECIES</u> & Introductions to the Genera (general growing requirements)	<u>Price per single bulb</u>	<u>Price per Pkt of 5-10 bulbs</u>	<u>Whole-sale Price per bulb 11 to 100 bulbs</u>
<p>All <i>Agapanthus</i> like well composted soil and can be planted in either full sun or semi-shade (most flower best in full sun but a few hybrids do prefer some shade). The winter dormant species must be in very well drained soil if planted in winter rainfall areas, ie a compost sandy mix.</p> <p>Most are Evergreen and waterwise but thrive on a good summer watering every 10 days or so (once a month or so in winter) and soil should be well drained. They form clumps quite fast and <i>are ideal for mass planting and landscaping as their roots bind the soil, so excellent for embankments too.</i></p>			
AGAPANTHUS_INAPERTUS subsp. pendulous : can only be shipped during winter dormancy	\$3.50	\$15.00 for 5	\$2.00

Medium violet blue pendulous flowers on very tall stems. Summer growing, winter dormant. Sun or semi-shade. Hardy. Waterwise.	\$8.00		
WHITE FLOWERS			
<u>HYBRID AGAPANTHUS</u>			
JONIE Dark purple pendulous flowers on shortish stems 40-60cm tall	\$5.00	\$20.00 for 5	
SILVER BABY White flowers with palest blue tips. Dwarf	\$2.50	\$10.00 for 5	
FULL MOON Magnificent large round heads of soft blue grey flowers on tall stems 1m+	*\$10.00 large FL *\$6.50 smaller medium	* \$45 .00 for 5 *\$25.00 for 5	
PURPLE DELIGHT purple flowers on 80-90cm tall stems	\$6.00	\$25.00 for 5	
SHONA White flowers early in the season. Sun to semi-shade. 50-70cm tall stems.	\$5.00	\$20.00 for 5	
BLUE BAYOU Deepish blue flowers. 60-70cm tall stems	\$6.00	\$25.00 for 5	
NEW HORIZON BLUE Dwarf with dark blue flowers on 40 – 50cm stems.	\$5.00		
CHARLOTTE Round headed mid blue flowers with a distinct darker central stripe. 60cm stems	\$6.00	\$25.00 for 5	
Plant the large species of summer growing and evergreen <i>Albucas</i> with about a third of the bulb protruding above the ground. They will rot if the soil is not well drained enough and they get too much water. They are truly waterwise and are best planted in a rock garden or in a dry area and left to the summer rains. Never put them under automatic irrigation. The winter growers should be in a very sandy well drained mix, keep dry in summer and do not overwater in winter. The dwarf winter species are ideal for small containers as is the summer growing shawii. These dwarf species must be planted with the tip of the bulb just touching the surface.			
ALBUCA SHAWII (SMALL YELLOW ALBUCA) 15-40cm tall stemmed, dwarf species, few long narrow leaves. Nodding, scented yellow flowers: spring & summer. Sun to slight shade. Hardy. Summer growing, winter dormant. Plant the tip of the bulb at ground level.	Too small		
ALBUCA VISCOSA	\$8.00 FL		

Dwarf species, winter grower, summer dormant. Flowers are scented pale green with yellow margins late winter to spring. Long narrow sticky leaves covered in glandular hairs. Leaves coil at the top. The more sun, the tighter the coils. Very well drained sandy soil. Semi-hardy.			
ALBUCA CONCORDIANA Dwarf species, winter grower, summer dormant. Yellow scented flowers with broad green keels in spring. Corkscrew coiled grey green leaves (same as spiralis in the more sun it gets the tighter the coil). Very well drained sandy and stony soil. Semi-hardy. Sun or slight shade.	Small \$10.00 very Ltd		
ALBUCA NELSONII (CANDELABRUM LILY) Large bulb protruding above the ground. Stems up to 1m tall. White flowers with greenish to brown central stripe: spring & summer. Evergreen. Hardy. Sun or slight shade. Waterwise.	*\$10.00 HUGE FL *\$2.50 small		
ALBUCA SP. Tallish narrow grey green smooth leaves. Winter grower, summer dormant. Sun. Hardy.	\$2.00 FL Very Ltd		
ALBUCA LONGIPES Tall narrow bright green sticky succulent-like leaves. Sun. Hardy. Winter grower, summer dormant. White flowers with green keels and inner tepals have yellow tips: late spring. Dry in summer.	\$4.00 FL Very Ltd		
AMARYLLIS PARADISICOLA – the rarest of the rare Only named in 1998. Occurs in one population in Namaqualand, a cool dry montane habitat. 10-20 large pink purple sweetly scented flowers in autumn. Leaves after flowers, broad hairy, flat rosette shape. A single heavy drench of rain at the end of summer should induce flowering and only water again from mid-autumn. Very well drained sandy soil. Protect from frost. Semi-shade.	X1 FL \$800.00		
AMARYLLIS BELLADONNA (MARCH LILY) Winter grower, summer dormant. Showy bell-like pink scented flowers in late summer. Semi-hardy. Sun or semi-shade. May stay evergreen in the summer-rainfall regions if watered in summer but must have very well drained soil.	*\$7.00 FL x1 left *\$4.00 3- 4yrs VERY LTD (a lot of young bulbs under propagation including white and red)		
Extreme heat and drought will result in <i>Ammocharis coranica</i> losing its leaves but they will resprout when very well watered or rains return. If kept in a container, try to keep the pot in dappled shade			

<p>AMMOCHARIS CORANICA (BERGLELIE) Summer growing, winter dormant. Sun or dappled shade. Sweetly scented, pink to red flowers: summer. Hardy. Up to 15 striking leaves in two opposite spreading fans, broadly strap-shaped. Keep reasonably dry in winter, very well drained soil BUT they do occur in the Karoo as well, so they can tolerate winter rains provided the soil is very well drained</p>	<p>*\$2.00 2yrs small *Huge FL size X1 available \$45.00</p>		
<p>AMMOCHARIS NERINOIDES Namibia. Seasonally moist areas. Large fragrant pink flowers on short stems after good rains ie summer. Summer growing, winter dormant. Sun. Semi-hardy. Extremely well drained soil. Dry in winter. Narrow linear grey green leaves, spreading just above the surface. A beautiful container subject.</p>	<p>X3 large FL \$50.00 each</p>		
<p>AMMOCHARIS LONGIFOLIA 9-14 leaves, spreading, curved sideways, dark green. Ivory to deep pink frangipani scented flowers: summer. Sun. Semi-hardy. Winter growing, summer dormant. Usually grow in seasonally moist areas so water quite well in winter, dry in summer.</p>	<p>Sold out</p>		
<p>AUSTRONEA GRANDIFLORA Occurs Sutherland to Calvinia to Calitzdorp. Solitary prostrate to sub-erect slightly curved leaf, lorate, lanceolate, very dark green with dark purplish green at the base. Sun. Semi-hardy.</p>	<p>\$10.00 FL</p>		
<p>BABIANA ANGUSTIFOLIA Cup shape blue to violet flowers with black or red markings on the lower tepals: late winter to early spring seasonally damp clay flats</p>	<p>\$2.00</p>		
<p>BABIANA RUBROCYANEA Lance-shaped hairy pleated leaves. Flowers are purplish blue with a carmine red centre: Spring. Sun. Semi-hardy. Dry in winter. Water well in summer, well drained soil</p>	<p>\$3.00 FL</p>	<p>5 for \$10.00</p>	
<p><i>Boophones</i> rot very easily. Never overwater. The soil must be an extremely well drained sandy and gritty mix. If the bulbs go dormant, stop all watering. They are truly waterwise. This also applies to the winter grower haemanthoides.</p>			
<p>BOOPHONE DISTICHA (TUMBLEWEED) EASTERN CAPE FORM FRILLY LEAF FORM Heavily undulated (frilly) leaves. Usually evergreen. Sun. Large magnificent round heads of pink flowers. Striking fan of grey green leaves with undulated margins creating that wavy effect. Hardy but if they stay evergreen, the leaves might be burnt in severe frost.</p>	<p>*2.5cm wide x1 available \$15.00 *3 – 3.5cm wide x6 available \$20.00 each</p>		

<p>TRANSVAAL FORM Winter dormant, summer growing. Hardy. Sun. Waterwise. Large fan shaped grey green leaves. Flowers same as above.</p>	<p>*FL \$40.00</p>		
<p>BOOPHONE HAEMANTHOIDES Winter growing, summer dormant. Sandy very well drained soil. Sun. Semi-hardy. Dramatic grey green fan shaped undulate leaves. Cream pink paintbrush-like flowers in mid-summer. Two thirds of the bulb should protrude above the soil. Slow growing. Becoming increasingly rare due to habitat destruction.</p>	<p>*\$120.00 Huge FL Ltd *smaller flowering to be added end of this week</p>		
<p><u>BRUNSVIGIA BOSMANIAE</u> 5-6 leaves dry at flowering, pressed to the ground, oblong, the upper surface dark green with red margins. Flowers in dense rounded umbel scented of narcissus, pale to deep pink: late summer into early winter. Sun. Semi-hardy. Winter growing, summer dormant. Dry in summer and very well drained soil</p>	<p>Sold out. Thousands of seedlings under propagation</p>		
<p>BRUNSVIGIA LITORALIS Endangered. Eastern Cape. Winter growing, summer dormant. Upright twisted leaves. Showy spreading red flowers: Feb to April. Year round rainfall. Well drained soil. Sun. Semi-hardy.</p>	<p>1cm+ wide very nice bulbs \$10.00</p>		
<p>BRUNSVIGIA GREGARIA Small growth habit to about 40cm tall. Dense umbels of pink to red flowers in autumn before the leaves appear 4-8 smooth flat hairy pressed close to the ground with clear or red margins. Sun to dappled shade. Semi-hardy. Summer dormant, winter grower. Well drained soil</p>	<p>*1-2cm wide x10 @ \$10.00 each *just over 2cm wide FL x10 @ \$13.00 each *2.5 to 3cm wide FL x9 @ \$20.00 each *3.1 to 3.7cm wide FL x2 @ \$25.00 each *4.5cm wide \$35.00 x1 *6cm wide</p>		

	huge \$50.00 x1		
BRUNSVIGIA GRANDIFLORA (Giant Candelabra) Larger summer growing, winter dormant brunsvigia with 10 to 15 leaves erect and undulating. Flowers on 1m tall stems and 80cm across, so striking, dark pink in early autumn. Dry in winter. Moist areas in summer. Sun. Hardy. Well drained soil	FL \$30.00		
BRUNSVIGIA NOVA SP. PELLABERG Winter growing, summer dormant. 2 lanceolate shiny green leaves without pustulate hairs. Dwarf. White flowers on short stems. Sun. Semi-hardy.	X3 FL @\$40.00 each		
Clivias are evergreen, semi-hardy (their leaves will be burnt by frost) and grow in shade. They all have strap-shape broadish dark green leaves. They need a rich compost soil, keep reasonably dry in winter, ie water once a month and in summer, a thorough weekly watering will suffice during extreme heat otherwise, watering every 10 days to weeks in summer. Clivia robusta is the exception and should be watered every week throughout the year.			
CLIVIA MINIATA (BUSH LILY) : early spring flowering plain leaves, orange flowers	*\$1.00 2yrs small *FL \$5.00 *BROAD LEAVES FL \$7.00 *YELLOW FLOWERS FL \$10.00 *DARK ORANGE RED FLOWERS FL \$9.00		
Crinum s thrive in hot and humid climates and our climate here at Hartbeespoortdam is ideal for them. Most are hardy as they go dormant in winter and even 'the uber special politifolium from Tanzania' has proven to be tough in winter. The more uncommon species that occur in the very dry regions of the northern provinces like crassicaule should not be watered at all during winter dormancy and do not overwater in summer.			

<p>CRINUM BULBISPERMUM (ORANGE RIVER LILY) Large trumpet shaped white flowers with a pale pink stripe: spring & early summer. Flowers are faintly scented. Leaves are large pale grey green recurved. Sun. Hardy. Summer grower, winter dormant. Ideal for wetlands, alongside water features and very moist mixed borders or containers. Grows near streams in seasonally moist areas so they thrive on regular summer watering but they are also waterwise.</p>	<p>*\$10.00 FL X1 left *\$2.00 small</p>		
<p>CRINUM MACOWANII (SABIE RIVER LILY) Summer grower, winter dormant. Long strap-like green leaves with gently undulating margins. Large pale to dark pink & white flowers: summer. Sun or dappled/semi-shade. Hardy. Ideal for wetlands, alongside water features and very moist mixed borders or containers. Grows near streams in seasonally moist areas so they thrive on regular summer watering but they are also waterwise.</p>	<p>* Very small \$1.50 *x3 7-8cm wide FL \$12.00 each</p>		
<p>CRINUM BUPHANOIDES (SAND LILY) Summer grower, winter dormant. Sun. Fragrant flowers white to pink: summer. Leaves are Hardy. Occurs in dry areas. Dry in winter and average water in summer (waterwise). Ideal for rockeries, veld gardens and containers. These are very slow growing bulbs and 8 yr old bulbs are a nice size but not huge.</p>	<p>*\$16.00 8 yrs Ltd bulbs are not huge as this is a slow growing species *\$7.00 smaller</p>		
<p>CRINUM MOOREI (NATAL LILY) Evergreen. Shade to dappled shade. Pale pink flowers in summer. Bright green recurved leaves. Tall stems. Semi-hardy. Very fast growing. <u>Lachenalias</u> are mostly winter growing, summer dormant small bulbs. They require very well drained soil and sunny spots with a little shade in the afternoon. They should ideally be kept dry in summer during dormancy. They are semi-hardy and must be protected against frost. They are ideal container subjects particularly on the Highveld. In the winter rainfall regions, they can of course be planted directly into the garden. Take care not to overwater them in autumn ie water frugally once the leaves appear otherwise they might rot. The soil should dry out inbetween waterings. We do have a number of other species in our greenhouse which we need to identify this winter. If you are interested in other Lachenalias, just let us know.			
LACHENALIA MUTABILIS There are numerous forms either with single lanceolate erect leaf with a crisped margin or 2 tapering spotted leaves. Mauve, pale blue and white flowers with yellow tips or yellowish green: winter to spring.	\$4.00 Ltd

<p>ORNITHOGALUM HISPIDUM Leaves 3-6, usually dry at flowering, oblong-lanceolate,</p>	<p>\$10.00 FL</p>		

often with spotted sheathing bases, often pubescent, margins thickened and minutely bristly. Flowers white in a narrow raceme, tepals spreading or reflexed. Sun or slight shade. Protect from frost. Average water in winter, dry in summer.			
ORNITHOGALUM / DRIMIA sp. 3 Dwarf with usually 2 paddle-shaped dark green leaves. Leaves usually have at least 2 distinct longitudinal lines. Lower leaf surfaces are a grape colour as are the leaf margins.	\$10.00 FL		
<i>Oxalis</i> are a must have for both winter and summer rainfall gardens. In the summer rainfall regions, Oxalis planted in containers or hanging baskets offer a rainbow of colours in the dull winter months and in the winter rainfall, they can be planted en masse in mixed borders, on rockeries and on embankments. Please note that they can only be shipped during summer dormancy unless sent by very speedy courier and kept moist in vermiculite. They need a thorough drenching at least once a week in winter (if the winter is very mild and the Oxalis are in containers, they will need to be checked for watering twice a week). Keep dry or quite dry during summer dormancy. We classify them as semi-hardy as they will be burnt in extreme frost. They do like a more sunny spot.			
OXALIS PES-CAPRAE A profusion of yellow flowers in anytime from late autumn to spring. Can easily be left in the ground in the summer rainfall regions all year	Sold out		
OXALIS PURPUREA WHITE Large pale mauve or darker pink flowers with a yellow centre late winter and spring .	\$2.00	*\$10.00 for 10

<u>PROTOTULBAGHIA siebertii</u> Dwarf bulb (naturally very small bulbs). Sun or semi/dappled shade. Summer growing, winter dormant. Hardy. Well drained soil. Small narrow grass-like leaves. Tiny white flowers in summer. Dry during dormancy and average water in summer. Uncommon in cultivation.	*\$1.50 FL *\$0.60 small	*\$10.00 for 10 *\$8.00 for 20 small	\$0.80
<u>PSEUDOPROSPERO FIRMIFOLIA SUBSP. NATALENSIS</u> Recently discovered Natal form of this rare bulb! Dwarf bulb with soft narrowish long leaves and pale mauve flowers in summer (similar to Scilla flowers). Dappled shade. Well drained soil. Average water. If neglected, they will go dormant in winter otherwise they will stay evergreen. Uncommon in cultivation	\$3.00 FL	*\$12.00 for 5	
<u>RADINOSIPHON LEPTOSTACHYA</u> Summer growing, winter dormant corm with dainty slender stems to 50cm tall. Hardy. Sun. Waterwise to average water. Very dainty small pink flowers in summer. Ideal for meadow gardens, rockeries. Uncommon in cultivation	*\$1.50 not yet FL	\$6.00 for 5 not yet FL corms	
<u>RESNOVA MEGAPHYLLA</u> Beautiful heavily blotched leaves with a burgundy underside and grape coloured flowers in spring. Semi or dappled shade. Hardy. Average water in summer but soil must be well drained. Summer growing, winter dormant, dry during winter dormancy.	*\$3.00 2-3yrs small *\$8.50 almost FL		
<u>RHADAMANTHUS PLATYPHYLLUS</u> Nieuwoudtville escarpment. Winter grower, summer dormant. 2 bluish green leaves pressed close to the ground, before flowers appear in spring/early summer.	*\$2.00 FL *\$0.50 small		

<p>Tiny creamy white yellow flowers on dainty tendrils. Dappled shade. Semi-hardy. Dry during dormancy and average water during autumn and winter. Due to small size, they are best kept in containers.</p>			
<p><u>ROMULEA TABULARIS</u> Winter growing, summer dormant. Occurs in seasonally moist sandy areas. Sun. Semi-hardy. Pale lilac flowers with prominent yellow cup. Leaves are erect and very narrow.</p>	\$2.00	\$1.50	
<p>ROMULEA OBSCURA Striking apricot red flowers with a greenish yellow cup: Sandy flats so very well drained soil and a good sandy mix. Sun. Semi-hardy. Winter growing, summer dormant, dry in summer. Short narrow erect leaves. 10-20cm tall.</p>	\$3.50	\$14.00 for 5	
<p><i>Scadoxus</i> are another must have for any shady garden or shady patio. Their flowers are magnificent. The summer growing, winter dormant species require very well drained soil, well composted soil, should be kept dry in winter and receive average water in summer (waterwise) & are hardy. Katherineae can grow in wet areas year round.</p>			
<p>SCADOXUS PUNICEUS (BLOOD OR SNAKE LILY KZN & EASTERN CAPE FORM ORANGE RED FLOWERS) Beautiful orange red paintbrush cup shape flowers: late winter to spring. Tall glossy green leaves on tall stems. Highveld red flowering form</p>	<p>*\$8.00 FL BULKING UP STOCK</p>	<p>\$60.00 for 10 FL</p>	
<p>SCADOXUS PUNICEUS - late summer/autumn flowering, southern most form (south western Cape: Stilbaai to Agulhas) Summer growing but can stay evergreen. At the coast, they grow in full sun or slight shade but at higher elevations we would strongly suggest, semi or dappled shade (no midday or afternoon sun). The more sun they get, the shorter the leaves. Stems are also shorter than the common puniceus 30-40cm tall. Flowers are orange to pale orange in late summer. They form very large clumps and readily form suckers unlike the other forms further north that rarely form suckers. They require a humus rich very well drained soil. If they stay evergreen, average water throughout the year (water should drain through). If they go dormant, no water during dormancy</p>	<p>BULKING UP STOCK</p>		
<p>SCADOXUS MULTIFLORUS SUBSP. KATHERINAE (KATHERINE WHEEL) Winter dormant to evergreen. Robust up to 1.2m. Shade.</p>	<p>\$6.00 about 2yrs to FL</p>		

False stem produced before flowers. Striking large round heads of deep pinkish red flowers in mid-summer			
SCADOXUS MEMBRANACEUS (DWARF PAINTBRUSH) Smallest Scadoxus species. Evergreen. Shade or dappled shade. Leaves have wavy margins, are spirally arranged and are shorter than the other Scadoxus. Burnt red flowers surrounded by large spathes: mid to late summer. Average water throughout the year, well drained soil.	FL \$20.00 Very Ltd		
SCADOXUS POLE-EVANSII (Inyanga fireball) Endemic to Nyanga region of eastern Zimbabwe. Grows in evergreen afro-montane forest at high elevations in humus rich soils. Base of the leaves are grouped to form a false stem or pseudostem. Leaves to 1.2m tall. Umbels of salmon pink to red flowers in early to mid summer simultaneously or just before the new leaves. A brief winter/early spring dormancy. Has a similar growth habit to Scadoxus multiflorus subsp katherinae. Shade. Protect from frost. Average water in summer, dry in winter. Uncommon in cultivation. Best grown in woodland gardens, shady beds or containers.	1yr old bulbs \$3.50		
At least a third of the bulb of the large Scilla species must protrude above ground. All are summer growers, winter dormant. Most require sun and very well drained soil. They are waterwise and hardy. Ideal for special rockeries or rock pockets and for containers.			
SCILLA NATALENSIS (BLUE SQUILL) - NOW MERWILLA PLUMBEA Striking pale violet blue white flowers on tall arching stems: late spring. Large broad tapering grey green leaves. Bulb is scaly and so attractive. A popular rockery and container subject. Bulb or caudex must protrude above the soil. SALE 30% DISCOUNT	\$20.00 very large FL	\$80.00 for 5	
SCILLA KRAUSSII Dwarf, summer growing, winter dormant. Sun or semi/dappled shade. Hardy. Short leaves and short flower stems. Pale violet blue flowers in late spring and early summer. Well drained soil, dry in winter. Average water in summer. Pietermaritzburg form with beautiful leaves.	\$5.00 FL	\$40.00 for 10	
SCILLA NERVOSA /SCHIZOCARPUS NERVOSUS (White Scilla). Summer growing, winter dormant. 40cm tall. Forms rounded clumps. Leaves are erect, leathery bright green seldom twisted. Large showy white flowers in summer. Plant with half or a third of the bulb above the soil. Very well drained soil. Waterwise, do not overwater. Hardy. CAN ONLY BE SHIPPED DURING WINTER DORMANCY	\$12.00 very large FL	\$50.00 for 5	

<i>Sparaxis</i> are dainty bulbs with very pretty flowers and lanceolate leaves. Winter growers, summer dormant. They should be kept reasonably moist during active growth and dry during summer dormancy. They are semi-hardy and should be planted in a sunny mixed border or containers.

<i>Tulbaghias</i> are often used in landscaping and planted in difficult areas where little else wants to grow (as is often the case with Agapanthus and Dietes) BUT the genera offers some interesting uncommon species too. Most Tulbaghias are waterwise, hardy (the leaves will be burnt by severe frost but will sprout again in no time in spring), evergreen, form clumps fast and thrive in warm sunny spots. The soil should be well drained and they should get some water all year.			
TULBAGHIA VIOLACEAE (WILD GARLIC) Greyish green thin leaves with strong scent and lilac flowers on and off throughout the year. Mass planting for	*\$0.60 FL	*\$4.50 for 10 rhizomes	*\$0.35

ZANTEDESCHIA PENTLANDII Very rare. Tapering erect leaves. Brilliant yellow flowers with dark purple throat: mid-summer. Sun or slight shade. Summer growing, winter dormant. Very well drained soil. Average water in summer but do not overwater. Dry during winter dormancy	*\$4.00 small *\$8.00 FL Ltd		
ZANTEDESCHIA VALIDA (heart-leaved arum) Very uncommon in cultivation and Vulnerable: occurs only in a small area in northern KZN between Ladysmith and Dundee. Winter dormant. Robust plant to 75cm tall with large broad speckled or plain leaves. Flowers are cream and dark purple at the base: usually in early summer, flowers are exceptionally large and very attractive. Sun. Hardy. Well drained soil. Waterwise.	Bulking up stock		

Botanical Books

If you love the bulbs, you will love this book **The Amaryllidaceae of Southern Africa!** Outstanding paintings, photography and text, very comprehensive,

years and years of extensive research. The text is produced by Graham Duncan, one of the most knowledgeable horticulturists and botanists in the field. The text includes a full description of each species, a short history of the discovery of each plant, various aspects of growth, pollination, locality preference and affinities with similar species. The watercolour paintings in the book are by Barbara Jeppe and Leigh Voigt. Barbara Jeppe, botanical artist extraordinaire, began work on the paintings in July 1971 and for the next 28 years she collected and painted over 200 species of Amaryllidaceae. After her death in 1999, her daughter, Leigh Voigt, a versatile and highly acclaimed artist herself, picked up where she left off and painted most of the subsequently described species. It is thorough easy to use guide is the first book dedicated entirely to the 18 genera in the family Amaryllidaceae in southern Africa. Apart from the over 260 exceptional watercolour plates there are detailed distribution maps and magnificent photographs showing plants in typical habitat conditions.

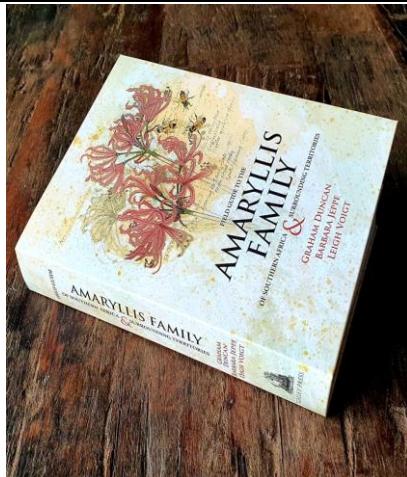

\$90.00 each + shipping

The Field Guide to the Amaryllis Family of Southern Africa & Surrounding Territories

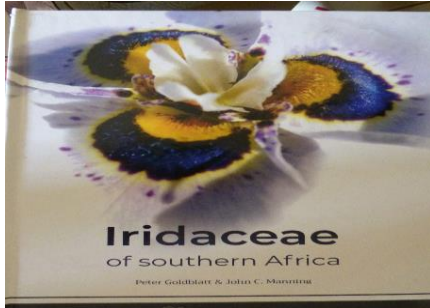

This 556-page, sturdy softcover volume features more than 560 photographs by 150 photographers (including us!), watercolour plates and maps for each of the 265 Amaryllis taxa, some pressed herbarium specimens, and comprehensive text suitable for laymen and scientists alike. There are notes on cultivation, the history and meaning of each species name and stunning photographs of plants in their natural habitats, showing Southern Africa at its pristine unspoilt best. Graham Duncan, Barbara Jeppe and Leigh Voigt. This is a field guide & revised follow up to the AMARYLLIDACEAE OF SOUTHERN AFRICA.
